

MEHRA/INNOVATIONS

# We engineer the operating models our clients run on.

Built with AI. Run by humans.

Established 2006 · 200+ builders · 400+ recruiting partnerships · 3 AI systems in pilot

Mehra Innovations (MI) is a bespoke engineering firm, unapologetically focused on one outcome: disrupting how our clients' businesses operate. We engineer the systems they run on—at the scale our clients need. *AI doing what AI does best. Humans doing what humans do best. The firm that knows the difference.*

## HOW WE WORK—3 PILLARS, 3 PROOFS

### AI-native, by design

Re-engineered around AI in the operating model. Not bolted on, not an afterthought.

**PROOF** AI works the whole SDLC—design, build, test, run—not just parts of it.

### AI-fluent, by hire

Everyone on the crew already works with an AI assistant in their daily flow.

**PROOF** We screen for pairing-with-AI, not whiteboard puzzles. The crew is the bar.

### AI-led, by outcome

AI directs where AI directs well. Humans lead where judgment matters.

**PROOF** Eval gates and telemetry on every system. We measure what runs, or we don't call it done.

## WHAT WE DO

### AI-fluent staffing

Engineers, product managers, designers and data professionals who build with AI from week one. Not body-shop staff aug—we screen and certify against a fluency bar.

### AI-embedded product engineering

Small pods, two-week sprints, eval gates. We build, rebuild and embed AI into your product without slowing the rest of the roadmap.

### AI-enabled products

Software with AI inside, run as a product. UnityIQ's DataIQ turns your existing data into decisions — the next claim, the next filing, the next buy.

## WHAT WE SOLVE \*

Expensive, specific problems for mid-size organizations, solved with our platform and crew:

- **BorrowerGraph** - refinance retention
- **EvidenceGraph** - continuous audit readiness
- **SMB Entity Hub** - loan adjudication, credit-memo copilot
- **DecisionFabric** - agentic decision intelligence

### In-flight pilots:

**Paralegal Copilot**—clears the next task: drafts, filings, discovery, with the source behind each.

**Healthcare Revenue Cycle Copilot**—surfaces the next claim to work, ranked by recoverable dollars and odds of payment.

**Buyer Copilot**—picks which vehicles to buy and the max price to pay, for the lowest acquisition cost.

## INDUSTRIES

- Financial Services
- Healthcare
- Retail
- Private Equity

## WHAT WE DON'T DO

- No commodity staff aug below the fluency bar.
- No multi-quarter waterfall builds.
- No advice we won't build ourselves.
- No AI feature we cannot measure.

## HOW TO ENGAGE

30-minute scoping call → fixed-scope discovery (~2 weeks) → first increment landed in weeks, not quarters.

Call us when you want an AI product live on your data in 8 weeks.

Call us when your product needs AI built in, not bolted on.

Call us when you're ready to move from engineers to builders.
